

DIGITAL LITERACY

Portfolio & Project Report
CSE0001 | VIT Bhopal University

 Name	Shreshth Sharma
 Registration	25BCE11231
 Course	Computer Science Core
 Session	2025 – 2029
 Course Code	CSE0001 – Digital Literacy
 Institution	VIT Bhopal University
 Date	March 31, 2026

Introduction

This report documents my work for the CSE0001 Digital Literacy course at VIT Bhopal University. I was assigned the role of a Student Digital Ambassador — someone who helps their batchmates navigate the digital world responsibly and confidently.

Over five tasks, I explored digital design, professional networking, coding platforms, professional communication, and cybercrime awareness. Each task is documented below with what I did, what I learned, and how it connects to real life.

Goal

To build a complete Digital Literacy Portfolio that I can continue growing throughout my four years at university.

All my work is stored in a public GitHub repository at: github.com/shreshthsharma-os/digital-literacy-project

About This Project

Digital Literacy Portfolio — CSE0001

A five-module practical project by Shreshth Sharma | Reg: 25BCE11231

This project is a hands-on Digital Literacy Portfolio created as part of the CSE0001 course at VIT Bhopal University. The course is designed for first-year B.Tech students and carries 1 credit on a Pass/Fail basis. The project is worth 100 marks and is assessed across five tasks, each covering a different module of the course.

As a Student Digital Ambassador, I took on the responsibility of not just completing the tasks for myself, but understanding each topic well enough to explain and teach it to my batchmates. This meant going beyond surface-level knowledge and actually creating real, usable resources — a real infographic, live profiles, a working quiz, professional emails, and a cybercrime safety checklist.

Task	Module	Marks
Task 1 — Infographic	Module 1: What is Digital Literacy?	20
Task 2 — Digital Portfolio	Module 2: Professional Online Presence	20
Task 3 — Coding Platforms	Module 3: Tools and Collaboration	20
Task 4 — Email Etiquette	Module 4: Digital Communication	20
Task 5 — Cybercrime Awareness	Module 5: Online Safety	20

All files are organised at: github.com/shreshthsharma-os/digital-literacy-project — submitted via the VITyarthi portal.

What makes this project different from a typical written assignment is that every deliverable here is something real and usable. The infographic can be shared with batchmates. The profiles are live online. The Google Form quiz can be taken by anyone. The emails follow real professional standards. And the cybercrime checklist contains genuinely actionable safety advice for any college student in India.

Task 1 — Digital Literacy Infographic

Module 1 | 20 Marks

What I Made

I created a one-page infographic using Canva, titled "Digital Literacy: Your Superpower in the Digital Age." The infographic uses bright colours, icons, and simple language to explain digital literacy in a way that any student can understand quickly.

What the Infographic Covers

Section	Topic Covered	Why It Matters
Section 1	What Digital Literacy Is	Gives students the right definition
Section 2	Useful Digital Tools	Points to tools they can use today
Section 3	Safe Internet Practices	Teaches how to stay protected
Section 4	Email Etiquette	Prepares for professional life

Tool Used

Free browser-based design tool. No download needed. Perfect for making visual content like infographics, posters, and presentations.

My Reflection

The most interesting challenge was fitting all the information into a single page without making it look too crowded. I had to be selective — choosing only the most important points for each section. Using colour-coded boxes and icons helped a lot. I found that good design is not just about making things look pretty, it's about making them easy to understand.

Task 2 — Student Digital Portfolio

Module 2 | 20 Marks

Platforms I Set Up

I created professional profiles on three platforms that are widely used in the tech industry and academic world.

Platform	What It Is	How I'll Use It
 GitHub	Code hosting and version control	Host all my projects and track progress
 LinkedIn	Professional networking	Build connections, apply for internships
 Kaggle	Data science community	Practice data skills, join competitions

GitHub Profile README

I created a special repository named after my username that displays an introduction on my GitHub profile page. It includes my name, branch, year, and one sentence about what I hope to learn.

Tip

Your GitHub profile is like an online resume for developers. Keep it updated with your best projects!

My Reflection

Setting up LinkedIn felt very different from creating a social media account. I had to think carefully about how I wanted to present myself professionally, even as a first-year student. The process made me realise that building a professional identity is something you should start early — not just before placement season begins.

Task 3 — Coding & Collaboration Platforms

Module 3 | 20 Marks

Part A — Coding Practice on HackerRank

I created an account on HackerRank and completed the "Solve Me First" beginner challenge. The problem required writing a simple function that takes two numbers and returns their sum. While it sounds easy, it helped me understand how coding platforms evaluate your answers using test cases, and how your code needs to work for all possible inputs — not just the obvious ones.

**Chal
enge**

Solve Me First — Beginner level. Result: All test cases passed ✓

Part B — Google Forms Quiz

I built a 5-question Digital Literacy Awareness Quiz using Google Forms. The quiz tests students on safe internet practices, digital tools, UPI safety, and email etiquette.

Q No.	Question Topic	Type
Q1	What is Digital Literacy?	Multiple Choice
Q2	Safe internet practice	Multiple Choice
Q3	Best platform for coding projects	Multiple Choice
Q4	Digital tool you use for studying	Short Answer
Q5	What to do with a suspicious email	Multiple Choice

Form

link:

My Reflection

HackerRank opened my eyes to how placement tests work — companies use similar platforms to test candidates. Google Forms surprised me with how powerful it is for collecting and analysing responses automatically via Google Sheets. I plan to use it for peer surveys in future projects.

Task 4 — Email Etiquette & Communication

Module 4 | 20 Marks

Email 1 — Requesting a Deadline Extension

To	Professor [Last Name]
Subject	Request for Extension on Assignment Submission – [Course Name]
Key elements	Professional greeting, clear reason, specific new date, apology, sign-off

Email 2 — Internship Application

To	Internship Coordinator, [Company Name]
Subject	Application for Summer Internship Opportunity – Shreshth Sharma
Key elements	Formal greeting, brief intro, skills mentioned, GitHub link, clear ask

Social Media Do's & Don'ts

✓ DO's	✗ DON'Ts
• Keep LinkedIn updated	• Post offensive or political content
• Use a professional profile photo	• Share personal details like phone or address
• Think before you post	• Badmouth professors or classmates online
• Follow industry leaders	• Spread unverified news or rumours
• Credit others' work	• Accept unknown friend requests without checking

Communication Scenario

One situation that shows how digital communication can go wrong: an employee posted frustrations about their workplace publicly on social media. Instead of raising the issue professionally through email or HR, it became a permanent public post that damaged both their reputation and the company's. The result? The employee was let go.

Key lesson

Every digital message leaves a permanent trace. A well-written email solves problems privately. A hasty social media post can end a career.

Task 5 — Cybercrime Awareness

Module 5 | 20 Marks

Case Study: UPI Payment Fraud

Type

UPI / Online Payment Fraud — one of the most common cybercrimes targeting Indian college students today.

How It Happens — Step by Step

Step	What the Fraudster Does	What the Victim Thinks
1	Posts a fake ad (selling laptop, job offer)	Sees a genuine opportunity
2	Chats on WhatsApp to build trust	Thinks they're talking to a real person
3	Sends a UPI 'collect request'	Thinks money is coming IN to them
4	Victim enters their UPI PIN	Believes they're confirming receipt
5	Money is instantly debited	Realises too late — fraudster is gone

Who Gets Targeted

College students and hostel residents are prime targets — especially those selling second-hand items online or looking for part-time jobs. They are new to UPI and may not read the payment prompts carefully.

Stay Safe Online — Prevention Checklist

	Use strong, unique passwords for every account — use a password manager
	Enable Two-Factor Authentication (2FA) on email, banking, and GitHub
	Never click links in unknown SMS or email messages
	Keep your phone OS and apps updated — updates fix security holes
	Avoid banking on public Wi-Fi networks
	Read the full UPI prompt before entering your PIN — you NEVER need a PIN to RECEIVE money
	Never share your UPI PIN, OTP, or CVV — not even with 'bank staff'
	Do not post photos of your Aadhaar, college ID, or bank card anywhere
	Report cybercrime at: cybercrime.gov.in Helpline: 1930 (24x7)
	Inform your bank within 24 hours if you are defrauded — reversal may be possible

My Reflection

What surprised me most was that these frauds don't involve any hacking at all. The attacker only needs to exploit trust and confusion. The "collect request" trick is frighteningly simple and effective because the UPI interface looks almost the same whether you're sending or receiving money.

One habit I've already changed: I now always read the full UPI screen before entering my PIN, no matter how confident I feel. I've also saved 1930 in my contacts.

Conclusion

This project was more than just a course assignment — it was a practical introduction to the digital world that I'll be living and working in for the rest of my life.

Task	What I Built	What I Gained
Task 1	Digital Literacy Infographic	Design + communication skills
Task 2	GitHub, LinkedIn, Kaggle profiles	Professional digital identity
Task 3	HackerRank challenge + Google Quiz	Coding + collaboration tools
Task 4	Professional emails + checklist	Written communication skills
Task 5	Cybercrime case study + checklist	Online safety awareness

The GitHub repository I've built here is not just a submission. It's the start of a portfolio I plan to keep updating — with projects, certifications, and experiences — throughout my four years at VIT Bhopal. I genuinely feel more confident navigating the digital world than I did before starting this course.

Final thought

Being digitally literate is not about knowing every tool. It's about knowing how to learn, adapt, and stay safe as technology keeps changing.
